Mattermost

12.08.2025

COVER LETTER

I'm writing to express my interest in the Software Engineer II position at Mattermost. The opportunity to design and deliver secure, scalable, and collaborative solutions for mission-critical industries deeply excites me, particularly given your open-core approach and impact on defense, intelligence, and critical infrastructure organizations.

My open-source contributions, including a major refactor of the OpenFn MySQL adaptor to improve query safety and developer experience, have honed my ability to collaborate in distributed, asynchronous environments. I take pride in writing clean, maintainable code with thorough documentation, and I enjoy mentoring and learning from peers through code reviews and technical discussions.

Mattermost's core values of Customer Obsession, Earn Trust, and Ownership align strongly with my own professional principles. I'm excited about the chance to work across the full stack, from React frontends to fault-tolerant Go backends, while contributing directly to one of the largest React and Go open-source projects in the world. I'm confident my blend of technical skills, product-minded thinking, and collaborative spirit would make me a valuable addition to your team.

Thank you for considering my application. I look forward to the possibility of contributing to Mattermost's mission of empowering the world's most critical teams to operate securely and efficiently.
